Press Release

Milliman recognized as 2011 Microsoft technical and high-performance computing partner of the year

Collaboration between Milliman and Microsoft powers creation of unprecedented financial engine for global insurance client

Seattle – July 12, 2011 – Milliman, Inc., a premier global consulting and actuarial firm, has been named recipient of the 2011 Microsoft Technical and High Performance Computing Innovation Partner of the Year Award. The company was honored among a global field of top Microsoft partners for demonstrating excellence in innovation and implementation of customer solutions using Milliman's MG-ALFA® actuarial projection system and the Microsoft platform.

"This award is the result of Milliman responding to a client need for a sophisticated financial modeling platform unlike any that had ever been developed," says Pat Renzi, Milliman principal and MG-ALFA® Global Practice Leader. "The Actuarial Systems Transformation project for Phoenix Group Holdings required a robust and dynamic risk management solution that takes full advantage of the Microsoft platform and our close relationship with Microsoft. The result of this collaboration is a financial engine that stretches the boundaries of what's possible in enterprise computing."

Phoenix Group Holdings is a UK-based consolidator of life insurance with more than 6 million policyholders and £67.5 billion in assets under management in a globally-diversified portfolio. The Actuarial Systems Transformation project allows for precise management of the company's broad portfolio even as Europe transitions to Solvency II, a complex new regulatory framework.

Awards were presented in multiple categories, with winners chosen from a set of more than 3,000 entrants worldwide. Milliman was recognized for providing outstanding solutions and services as Microsoft Technical and High Performance Computing Innovation Partner of the Year. The Technical and High Performance Computing Innovation Partner of the Year Award recognizes Milliman for enabling scientists, engineers, and analysts to solve the world's most complex problems through innovative simulation and modeling in the cloud using Windows HPC Server 2008 R2, burst capability, Windows Azure, and Microsoft parallel development platform.

"Microsoft is pleased to announce Milliman as Technical and High Performance Computing Innovation Partner of the Year for its contributions as a provider of cloud-based simulation and modeling solutions to the scientific community," said Bob Kelly, corporate vice president of Infrastructure and Server Marketing at Microsoft. "Through its landmark innovations in technical computing applications, Milliman has enabled engineers and researchers to identify solutions to some of the world's most complex problems."

The Microsoft Partner Awards recognize Microsoft partners that have developed and delivered exceptional Microsoft-based solutions over the past year.
